The Industrial Development Branch is publishing this pamphlet with the express intention of stimulating interest on the part of Ontario manufacturers in the market for exports which exists in the United States. In presenting these statistics it is hoped that Ontario manufacturers in growing numbers will take active steps toward examining the United States market for possible export opportunities for their products.

The United States is the largest importer in the world and a surprisingly high percentage of the goods it acquires externally are in full manufactured form. Of the \$15 billion worth of goods imported into that country during 1960 in excess of 45 per cent were fully fabricated.

This large volume of manufactured goods imported into the United States annually would appear to justify the belief that many possible export opportunities exist for Ontario manufacturers. Certain conditions including the current exchange rate as well as the up turn in the American economy are favourable to Canadian exporters. These circumstances should encourage certain manufacturers to re-examine the export situation as it relates to their particular product as well as encouraging still others to make their first efforts in the export field.

The value of selected imports into the United States for the years 1959 and 1960 are taken from the United States Imports of Merchandise for Consumption, Report No. FT110, published by the United States Department of Commerce. Only import items valued at \$1,000,000 or more have been considered.

The material in this pamphlet is divided into three sections. The first section shows imports into the United States from all sources by broad commodity classes and divisions. The next section shows imports by selected individual products. Canada's share is indicated when in excess of \$50,000. The third section contains a list of forthcoming United States trade fairs and exhibitions at which some manufacturers might wish to exhibit.

Several Government agencies stand ready to assist the Ontario manufacturer to expand his export trade. The Industrial Development Branch of the Ontario Government maintains offices in Toronto, Chicago and New York, as well as in London, England. The Federal Government, through the Department of Trade and Commerce, maintains trade commissioners throughout leading cities of the United States, including New York, Boston, Chicago, Detroit, Los Angeles and New Orleans. Canadian Government offices in San Francisco and Seattle are without trade commissioners but do take care of trade work in their area. These officials can give valuable first-hand market information to Ontario manufacturers wishing to export.
